Guidelines for Disposal of Chemical Waste

SafetyNet #: 8

All hazardous material and hazardous chemical waste must be picked up by Environmental Health and Safety (EH&S) or an EH&S-approved contractor. Instructions and forms [1] to request pickup are available on the EH&S website.

Drain Disposal

Drain disposal of non-hazardous materials is strictly regulated. See SafetyNet #6 [2] “Can This Go Down the Drain?” for more information on the Local Limits Program.

Carcinogens

Any waste containing regulated carcinogens must be collected by EH&S and disposed of as hazardous chemical waste. Contaminated lab ware, such as small vials and petri dishes, should be placed in secure, double plastic bags and labeled with a hazardous waste label.

Sharps

All sharp objects such as needles, syringes, and broken glassware must be placed in a hard-walled container and labeled with the hazardous waste label.

Light Bulbs

All fluorescent, metal halide and mercury vapor bulbs are considered hazardous waste and must be disposed of properly. Please contact the Facilities Service Request Center at 530-752-1655 to arrange pickup of your used light bulbs.

Aerosol Cans

Aerosol cans that contain or previously contained hazardous materials (such as paint or solvents) are considered hazardous waste. These aerosol cans should be labeled with a hazardous waste label and disposed of through EH&S.

Oily Wastes

Oil soaked rags, absorbent pads or floor sweep must be stored in metal cans with tight fitting lids, and disposed as hazardous waste.
Empty Containers

Packaging and Labeling Requirements
Materials must be properly packaged and labeled for safe transport.

- Liquids must be in leak-proof containers compatible with liquids. All containers must be securely sealed with lids. Ample headspace should be left in liquid waste bottles to allow for expansion.
- Do not use “biohazard bags” for anything other than biohazardous materials.
- Incompatible chemicals must be separated. See SafetyNet #4 [5], “Partial List of Incompatible Materials” for additional information.
- Waste containers must be labeled when the first drop of waste is added. Use a “Hazardous Waste” label (MS Word 6.0 format) available on the EH&S website [6]. The proper label is dated 01/11 in the bottom right corner. Other versions of the waste label may be incomplete and should not be used. All portions of the label must be completed.
- Broken mercury thermometers should be placed in the original shipping tubes, with the ends sealed with tape and placed in securely sealed double plastic bags. If the original shipping tube is unavailable, seal the broken ends of the thermometer with tape, and place in securely sealed double plastic bags. Label the plastic bag with a completed hazardous waste label. See SafetyNet #16 [7] “Guidelines for Mercury Spill Control” for additional information.
- Contact EH&S at 530-752-1493 before packaging unknown chemicals or chemicals in corroded or damaged containers, or if you have questions about the suitability of containers.

Special Wastes
Disposal of the following special wastes should be coordinated with EH&S (530-752-1493):

- Acid bath pump outs
- Water-reactive, pyrophoric, organic peroxide, or other special wastes
- Picric acid, dried, other than dilute picric acid solutions such as Bouin’s fixative
- Compressed gas cylinder that cannot be returned to the vendor
- Unknown wastes

Chemical Waste Pickup
Requesting pickup of your hazardous waste:

- Use the On-Line Request System [10] on the EH&S website to transfer the request electronically to Environmental Health and Safety.
Your waste will be picked up within five working days of receipt of your request. Please do not call EH&S to request a hazardous waste pick-up.
