Environmental Alarms in Animal Facilities

Purpose
The purpose of this policy is to define when environmental alarms, with central monitoring and a notification system, will be required in animal housing rooms. Temperature alarms provide a mechanism to ensure room temperatures stay within the ranges necessary to prevent catastrophic loss and is not a substitute for routine temperature monitoring (e.g., daily temperature logs) to maintain the recommended temperature range for animal well-being. The alarms are a back-up system to aid in ensuring the well-being of the animals in the room, as well as help reduce unintended variables that may impact the research studies.

Policy
The IACUC has determined that temperature alarms must be installed in all indoor animal housing areas. Animal areas housing aquatic species may not need "room temperature alarms", if the equipment (i.e., pumps, filters) and/or tanks that hold the animals are alarmed in some manner and a notification system provides immediate contact to the facility manager or designee.

In some animal housing areas a central alarm may be appropriate, the IACUC may also require additional rooms be alarmed, these will be determined on a case-by-case basis.

Daily temperature logs must be maintained to document the temperatures are within the ranges required by the Animal Welfare Act (AWA) and the ILAR Guide. Temperature alarms are intended to detect HVAC system failure; they are a backup mechanism for daily temperature checks rather than a replacement.

Procedure
It is the responsibility of the Scientist-in-Charge (SIC) and Technician-in-Charge (TIC) to ensure that all animal rooms in their facilities that fall in the above categories are properly alarmed prior to housing animals. The SIC and TIC must also ensure the system is functioning properly, that it is tested at least annually, and appropriate preventive maintenance is provided. The SIC and TIC must also establish a notification system for alarm response.

To have alarms installed or to request an estimate, place a work order with Facilities Management at http://om-as.ucdavis.edu/FacOM/wwosFacilities.html [1]. In case of an emergency call 530-752-1655.
