E-Cigarettes and JUUL
Addicting a New Generation

Wednesday, May 22
Noon – 1 p.m.
1005 Genome Auditorium,
Vet Med Campus

Youth and young adults are more likely to use new and emerging tobacco and nicotine products including e-cigarettes, vapes, JUULs, and Sorens, than any other age group population. These products are changing the landscape of tobacco control.

Sales of JUULs have increased 800% in the past year, and research shows that these products are being used by young people who may have not considered using tobacco.

This presentation will be led by Kim Homer Vagadori, the Project Director for the California Youth Advocacy Network.
